The Discussion:

Unleashing the wealth in Africa's Agriculture with an Innovative "Risk Sharing" system for economic growth and financial inclusiveness. Africa has the largest arable land of all continents, the yield per acre of land in agriculture commodities is one of the lowest, yet we have more labour unit per acre of land.

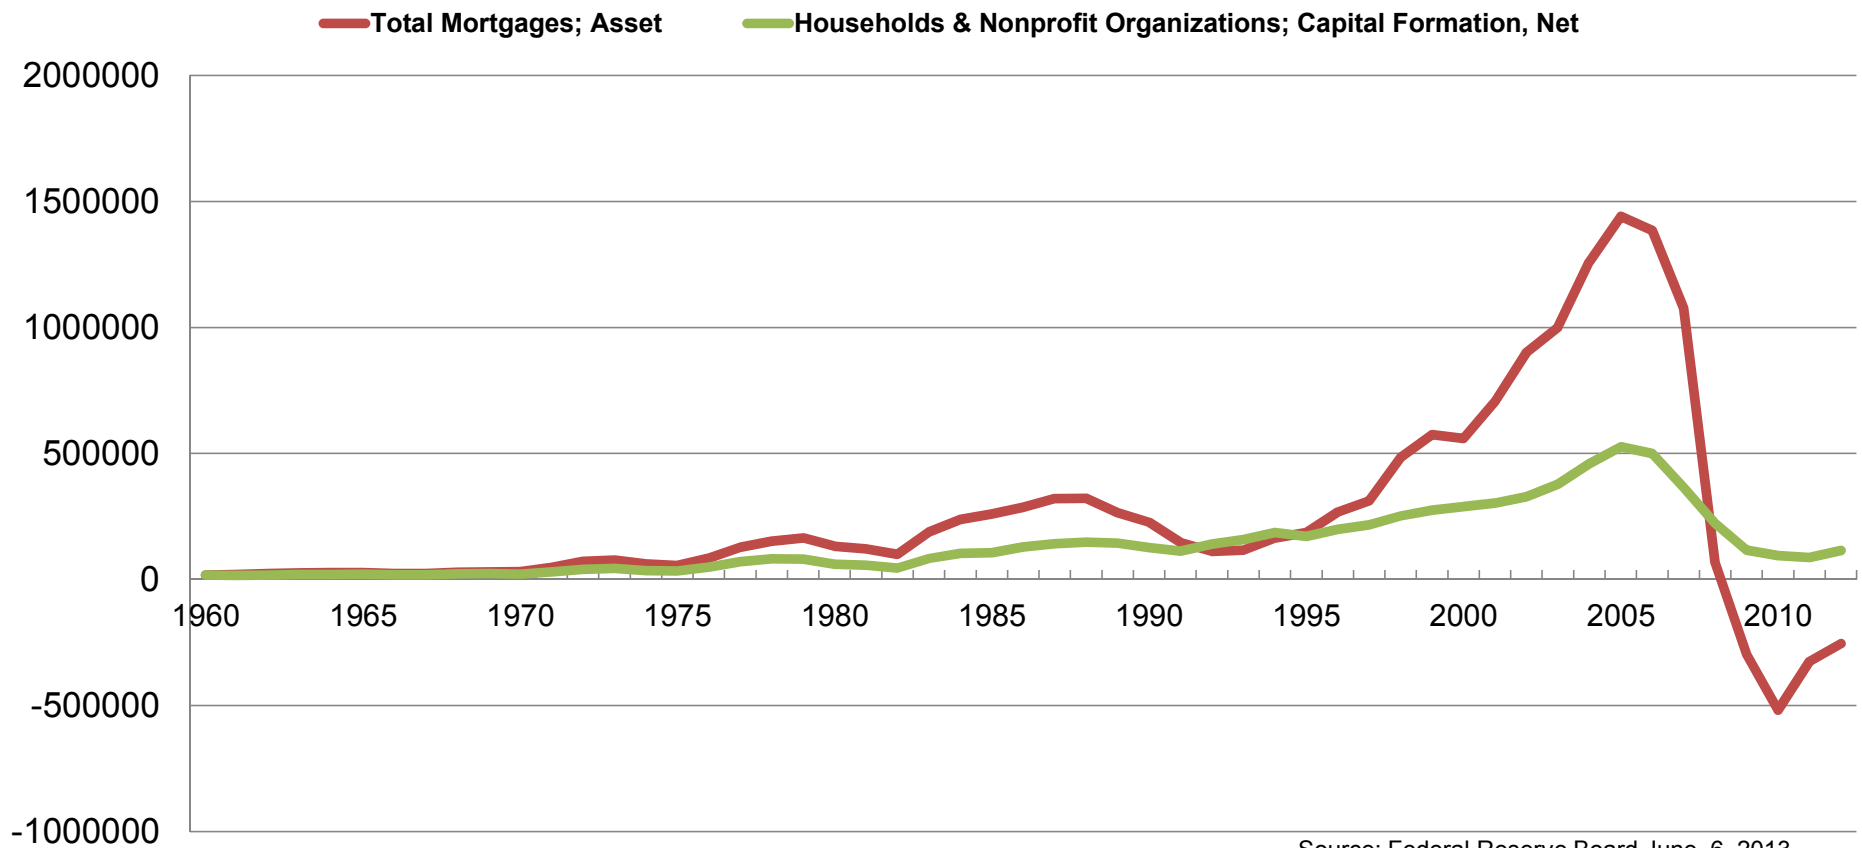

- How do we improve the efficiency of labour production?
- How do we create a "Risk Acceptable " environment for lending to boost production (perceived Risk Vs real Risk)?
- How do we engage local producers in Global Commodity trades?

COMPARATIVE ANALYSIS OF SELECTED REGIONS FOR GDP/LAND AREA/POPULATION

	EUROPEAN UNION	USA	AFRICA	SOUTH AMERICA
◆ GDP	30.31%	23.50%	5.24%	4.98%
□ LAND	2.90%	6.60%	20.28%	11.41%
▲ POPULATION	7.38%	4.53%	13.61%	5.64%

Real Asset as Source of Capital Formation and Economic Development – USA

US Only - Futures/ Contracts Vs Physical Commodities Traded in \$(TRLNS)

THE WEALTH GROWTH IN COMMODITIES TRADING

Operational Design: Managing the Market Risk Via an Independent Entity responsible for Settlements/arbitration

The operational design of the MoComEx is based on an Innovative way of trading that is focused on financial inclusiveness and less on the speculators in the market. It leverages the participants' assets to minimize the market risk while unleashing the dormant assets of the individuals to create wealth (Producers and buyers alike).

CAISSE DE LIQUIDATION (CL) (INDEPENDENT ENTITY BUT CONNECTED TO THE EXCHANGE)
